

Contract Research Services

Contract research services for in vivo nonclinical studies.

Partnering with DSI to execute a variety of non-clinical studies will improve your research outcomes. The experienced services team alleviates space, time, training and labor challenges involved with successful study execution.

Connected Every Step of the Way

Every study is managed by a dedicated team of scientists, project managers and animal care staff offering broad therapeutic expertise. With a collaborative approach the team gains a deep understanding of research goals and ensures clear communication and direct line of access throughout the study.

Tailored to Your Study Needs

DSI has strong relationships with a variety of animal providers to ensure animal model specifications and requirements are best suited for desired study outcomes. Studies are executed using a variety of telemetry options for continuous data collection ensuring maximum utility in research applications such as cardiovascular, glucose metabolism, neuroscience and more. With the steep costs associated with developing new animal models and therapies, DSI offers a flexible approach for a seamless contracting experience.

Technical Expertise

Comprised of experts in DSI technology using best in class surgical techniques and data analysis, the team is ready to assist with study design and execution on small animal models.

Study Quality

DSI's team has industry experience and knowledge; we understand the challenges of outsourcing studies and work closely with you to ensure the quality of the study is consistent with your prior research.

Expectations for quality will be achieved by

- using proven techniques and processes designed to deliver results
- maintaining data integrity with implantable telemetry
- preserving animal welfare standards
- delivering improved study outcomes with consistent study execution
- meeting study goals and timelines

DSI is a pioneering biomedical research company focused on preclinical systems physiology and pharmacology. The recognized global leader in physiological monitoring, DSI offers telemetry, instrumentation, software and services that facilitate accelerated, well-informed drug therapy and development decisions.
